

WALDORF 1:1:

LECTURE #5

Science Through the Grades

Speaker: Robert Teuwen

Thursday, February 17

7:00 - 8:30 pm

Waldorf education is all about bringing subjects to life for students, finding the vibrancy and creative spirit that inspired the development of each area of study.

Science is no exception.

Science today often requires students to take theories at face value, rather than examining the theories close up and personal and in a hands-on way. In this day and age, where many educators count “science” as worksheets or reading a book about nature, Waldorf counts science education as **DOING**. This is an extremely important point, and an essential foundation for a future scientist.

Please join Robert Teuwen as he discusses and demonstrates the phenomenological approach to science.

Speaker: Robert Teuwen joined Waldorf Academy in 1994 and is currently the Gr.6 Teacher. He has graduated Grade Eight classes in 1999, 2002, 2006 and 2009. He graduated from Toronto Waldorf School in 1984 and went on to Robert went on to obtain a degree in Physics and Philosophy at the University of Toronto. In 1993 he became the Grade Eight class teacher at The Toronto Waldorf School.

Public Lecture: Suggested \$10 Donation

Please pre-register for childcare \$5.
